

## ABSTRACT

A table includes a support leg having an elongated channel extending longitudinally along at least a portion of the support leg and opening laterally outwardly from said support leg. The channel has an open end at a top of the support leg. In a preferred embodiment, a catch member extends across at least a portion of said channel and a worksurface is supported by the top of said support leg. In another aspect, the worksurface has a cutout shaped to receive at least a portion of the top of the support leg with at least a portion of the channel nested in the cutout. In a preferred embodiment, the support leg includes a socket that is shaped to receive a portion of the worksurface. A method of routing a utility line on a table is also provided.
